

The privacy LLM gateway for finance and operations.

Caliber is the privacy ingress for finance teams. Sensitive data is redacted at the gateway or routed to Caliber Model running in your trust boundary — never to a third-party LLM. Every interaction recorded in a tamper-evident audit chain.

Your CFO wants AI. Your CISO won't allow it.

THE CFO SEES UPSIDE

10+ hours/week saved on reconciliations, summaries, drafting.
Faster cash forecasts, AP anomaly detection, vendor reconciliation.
Plain-English answers from the dashboard, on demand.
Junior analyst leverage on senior-controller work.

THE CISO SEES AUDIT RISK

Bank-account numbers and IBANs in ChatGPT logs forever.
Vendor relationships exposed to a third-party model.
No way to prove what was sent or when — no audit trail.
SOC 2 finding · regulator letter · board memo.

Either way, you lose.

O P T I O N A

Don't use AI.

Safe · compliant · slow.

You stay safe but burn the 10+ hours per week your peers are saving. Junior analysts grind through tasks AI does in seconds. Best people leave for firms that 'figured out' AI before you did.

O P T I O N B

Use it anyway.

Productive · exposed · waiting.

Your controller pastes bank statements into ChatGPT to save time. Vendor names, IBANs, salary numbers — all in a third-party log with no contract, no audit trail. One screenshot leaks and your DPA breach starts a chain reaction.

Caliber.

Your private AI ingress.

Caliber is the single ingress your team's apps call instead of public AI. We classify every prompt, redact what shouldn't leave, route the most sensitive work to Caliber Model running in your VPC, and record every interaction in a hash-chained audit log your auditor can verify in 60 seconds.

0 1

Smart routing

Per-prompt decision. Per-tenant policy.

0 2

Invisible upstream

Sensitive entities tokenised at the gateway.

0 3

Caliber Model

Bank-level data stays in your VPC, ever.

0 4

Provable

Hash-chained log. Tamper-evident.

Three tiers. One gateway.

U S E

Bank reconciliation, payment ops, account-level analysis.

Classify.

Redact. Route. Log.

01

Classify

PII, IBANs, account numbers,
vendor names, payment refs —
detected on every prompt.

02

Redact

Sensitive entities replaced with
stable tokens. Mapping never
leaves the gateway.

03

Route

Per-tenant policy picks the tier.
Customer-configurable, audit-
visible.

04

Log

Every call hashed and chained
into an append-only log.
Tamper-evident.

Every call hashed.

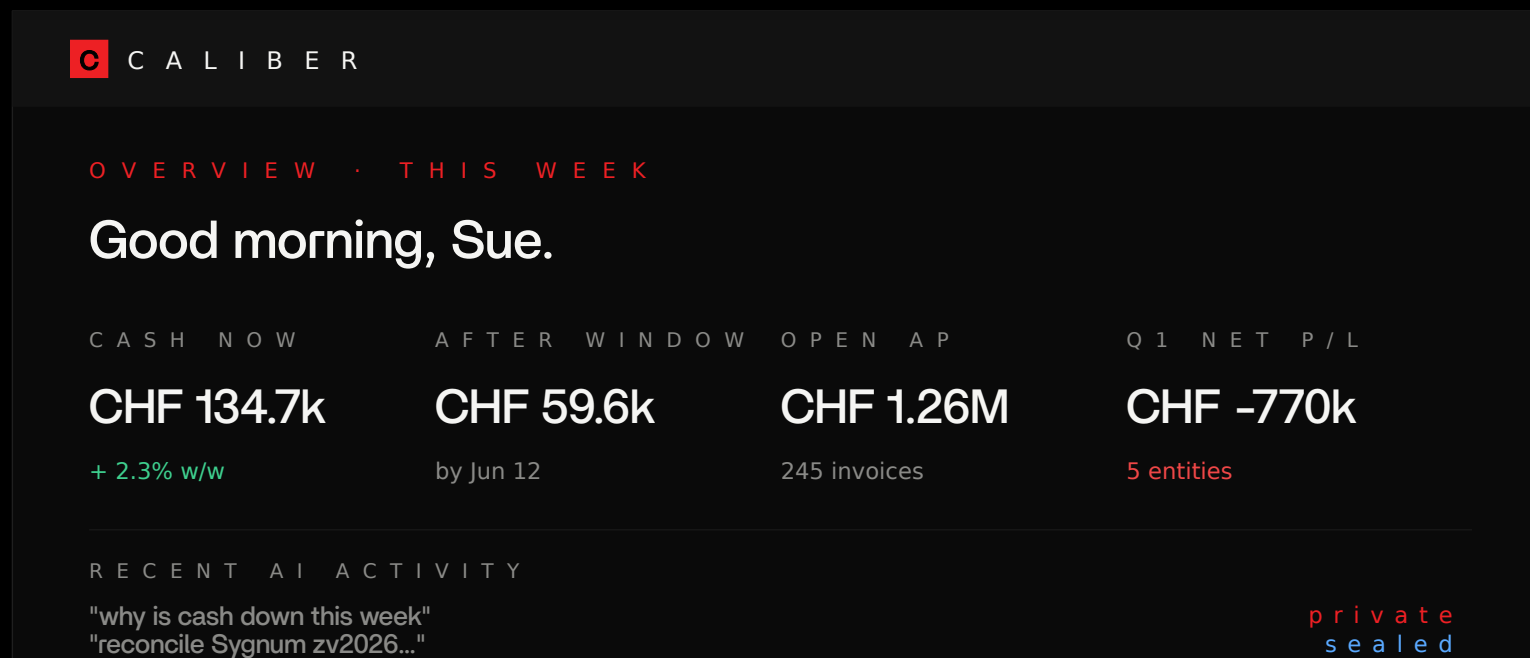

Every chain verifiable.

Each LLM call produces an entry: timestamp, tenant, user, model, tier, redaction stats, plus SHA-256 hashes of prompt and response. Each entry's chain field hashes the previous entry. Remove or modify any row → chain breaks → any auditor can prove it.

- Exportable to your SIEM in one click
- Tamper-evident · any modification breaks the chain
- Per-tenant scoped · never mixed across customers
- Auditor-verifiable in under 60 seconds

The dashboard your CFO actually uses.

Built around the questions
your CFO actually asks.

- Live KPIs from your source systems
- Full ERP — AP, treasury, payments, fund admin
- AI built in. Tier + redaction visible per call.

16 connectors. Live in an hour.

Modern connector catalog UX. The customer picks the tools their team already uses, clicks Connect, walks through OAuth or pastes an API key. No services engagement. No consultants. No 8-week pilots.

Receipts for everything we claim.

SOC 2 Type II

Type I Q3 · Type II Q1 next year. Vanta-managed.

ISO 27001

ISMS certification in parallel with SOC 2.

GDPR + DPA

Standard DPA. EU representative on file.

BYOK / HYOK

Customer-held KMS keys. Revoke any time.

ZDR contracts

Zero-data-retention with every LLM provider.

Region-pinned

EU · US · UK data residency at signup.

Pen-tested

Annual third-party audit. Reports under NDA.

Customer-cloud

Optional VPC deployment for enterprise tier.

Two-week paid pilot. Your data. Your team.

W H A T Y O U G E T

- Caliber gateway deployed in our EU cloud, scoped to your tenant
- Up to 3 data sources connected, we do the onboarding live with you
- 10 named users from your team · full Caliber + AI Agent access
- Weekly check-in with founder · dedicated Slack support channel
- 14 days of hash-chained audit log, exportable as evidence
- After 2 weeks: keep going under contract, or walk away · no obligation

The window is open.

Three things are true today that weren't 18 months ago. Together they make this the moment finance teams can actually use AI — and the moment regulators start paying attention to ones that do it wrong.

0 1

Models are good enough

Frontier models now handle finance reasoning at controller level. The technology hurdle that kept this from happening in 2023 is gone.

0 2

Regulators are looking

EU AI Act, FINMA guidance, and SEC examination priorities now flag uncontrolled LLM usage in financial services.

0 3

Buyers are educated

Every CFO has AI in their browser. The question isn't whether to use AI — it's how to make it safe.

Let's get you safe with AI in the next 30 days.

0 1

Kickoff call

30 minutes, this week. Pick 1-3 data sources to connect first.

0 2

Onboarding

2-3 days. We connect everything, you walk through the dashboard with your team.

0 3

Sprint + decide

2 weeks live. Your team uses it daily. At week 2, keep going or walk away.
